👥 JUNIOR DIVISIONS

Make a copy (File > Make a copy OR use this link) for individual use and edit as needed

Pre-made sample agendas based on experience and division of student team

The included agendas are made for a 2-hour meeting (OR two 1-hour meetings OR 1-hour meeting and the things missed as homework for the team).

1 -hour meeting markers are placed to indicate which activities to do if you are only doing a single 1-hour meeting each week.

The remaining activities will have to be done by the team members between meetings.

Table of Contents

WEEK 1

WEEK 2

WEEK 3

WEEK 4

WEEK 5

WEEK 6

WEEK 7

WEEK 8

WEEK 9

WEEK 10

WEEK 11

WEEK 12

WEEK 1

Focus during the meeting:

1. Introduction
2. Identify Problems
3. Basics of AI and Algorithms

Focus after the meeting:

1. Identifying problems in community
2. Research on apps

Preparation in advance of the meeting:

- Print/have virtually available the Team Agreement (one copy per team)
  - If 1-hour meetings, end this Agreement to students as a pre-task to fill and bring to the meeting.
- Print/have virtually available the Identifying Problems worksheet (one copy per team)
- Print/have virtually available the Understanding your Community worksheet (one copy per team)
- Review the Team Agreement Video Guide
- Go through the agenda once
- Open all the links and practice the flow of instruction for the activities

10 min	**Icebreaker** If the students are new to each other or new to you do the Speed Meeting icebreaker: Divide students into 2 groups and form pairs such that students from different teams are in the pair. Each pair has 2 minutes to find out each other's answers to the below questions: 1. Their name 2. Their contact information 3. What do they like doing in their free time? 4. Why do they want to be a part of Technovation? After 2 minutes ask all the students from one group to switch partners and repeat the same process for 2 minutes. Repeat until time permits. End the icebreaker by sharing that you want everyone to work towards building a safe and comfortable environment where they trust each other.
15 min	**Introduction** As you show the below image, explain the project timeline from January to April including milestones. Briefly explain the 6 submission guidelines, so the team understands what they are

	working towards. 1. Project Name & 100-Word Description 2. Pitch Video 3. Technical Video 4. User Adoption Plan (Junior Teams) or Business Plan (Senior Teams) 5. Technovation Learning Journey 6. Mobile App Source Code or Web App Source Code 7. Team Photo and Summary (Optional) Look at 3-5 previous examples from the Technovation App Gallery to inspire the team. Ask the students to show how excited they are for creating their own project after seeing examples: 👍Thumbs up - very excited to work ✊Fist - I am ready to work 👎Thumbs down - I feel scared *Use the responses to get a sense of how confident the group is feeling and estimating the amount of motivation and support they need.* *(Send this to students as a pre-task for a 1-hour meeting. Review and agree to a common meeting time)* • Set a meeting schedule for the next 12 weeks. Fill the Team Agreement, deciding as a team how and where you will meet. It could be virtually or in person, depending on geography and safety. Thank the students for creating and committing to the team agreement and schedule.
25 min 	**Topic and Activity 1** ***(only do Page 1 if 1-hour meeting)*** Go to the "Identify Problems" section and use the slides to: • Introduce and Explain UN SDGs • 💡**Identifying problems Activity 3:** Identifying Problems worksheet (Page 1) - practice categorizing problems according to UN SDGs. • 💡**Identifying problems Activity 4:** Identifying Problems worksheet (Page 2) Brainstorm more everyday problems you encounter. • Page 3 will be done as a task outside of the meeting
10 min	**Topic and Activity 2** In the "Introduction" section slides: • Discuss: What are some of the things you like that are created with code • Explore the slides with Coding Examples and AI Examples • Ask each student to share about the Technology they are most interested in.
5 min	**Break time**

20 min 	**Topic and Activity 3** ***(only do first two bullet points if 1-hour meeting)*** In the Solving Problems with Technology section use the slides to: • Watch the video in the "How AI Works" sub-section to learn the basics of AI. • Explain 3 basic parts of AI *(input (dataset) -> learn patterns (algorithm) -> make predictions)* • Go through the Google Maps Example • Do the 💡**Solving Problems with Technology Activity 2:** Quiz Yourself! Given 2 options, choose which is AI and which is not.
20 min	**Topic and Activity 4 (only if team is new to coding, otherwise use the time to do one of the homework tasks)** Ask each student to share which apps they have chosen from Activity 2 and what features they discussed. Transition to below activity *Note: Setting up can be tricky, as a mentor, you should go through the process yourself prior to the meeting so you can help troubleshoot any problems students may have.* You should have a good sense of which students might be up for building a web app. If they've coded before, or participated in Technovation before, they should consider doing the web app activities. If they are novices, direct them to App Inventor or Thunkable 📱**Exploring Mobile App Builders Activity 1:** Setting up App Inventor (students will need a Gmail account, they can create one) | Thunkable. You can have the team split up and have half use App Inventor and half use Thunkable to see how they like the platforms. They can report back to the team how they like/dislike the platform. 📱**Exploring Web App Builders Activity 1:** Install Python. Here is a good set of instructions for Window, Mac, or Linux. Install a code editor (video shows you how to install Visual Studio Code) and then install Streamlit to run it from the code editor. Run a very simple Streamlit web app in the VS Code environment by following this video.
20 min	**Topic and Activity 4 (only if there is time - this is an optional lesson)** Go to the Algorithms section of Student Curriculum to: • Explain the concept of step-by-step • Provide a definition of algorithms *(a term used in programming, is a set of steps to perform a task)* • Watch the video on "What is an Algorithm" only from 1:35 to 4:05 • Discuss takeaway *(Computers have no intelligence and will only do what they are instructed to do. Programmers must be explicit and detailed when writing the steps needed to perform a task)* • 💡**Write an Algorithm:** Conduct the writing activity either for dance or drawing.

10 min

Homework: Tasks before the next meeting (to do in their own time - 2.5 hours)

Discuss the below tasks with students. Ask them to take note of the tasks and complete them on their own time. Divide tasks among teammates as needed.

📝Task 1: In about 15 minutes, complete the 💡**Identifying problems Activity:** Understanding your Community worksheet (Page 1).

- Show the worksheet and clarify that communities could be based on Sports, Religion, Neighborhood, Work/Occupation, etc.
- Use the community section of the lesson if required for further explanation.
- Ask them to choose a community that they would want to work with for the rest of the worksheet.

📝Task 2: In about 60 minutes, complete the Understanding your Community worksheet (Page 2) after observing your community.

- Observations could be done together (if same community), but each student should write their own notes and worksheets.

📝Task 3: In about 15 minutes, complete 💡**Identifying problems Activity 5:** Identifying Problems worksheet (Page 3)

- Categorize your identified problems according to UN SDGs.

📝Task 4: In about 30 minutes, do the 💡**Solving Problems with Technology Activity:** Features of your Favorite App

- Investigate your favorite apps and what features of a mobile phone they use. Write about at least 3 apps.
- Give an example of your favorite app/Duolingo: features of a mobile phone are Touchscreen Interface, Microphone, Notifications, Offline Mode. Social Sharing

📝Task 5: In about 30 minutes, complete either the App Inventor or Thunkable activity. Or the web app activities if they are making a web app.

Note: You will be checking in at the start of each session to see what has been accomplished and is outstanding. Let the students know that you will keep a track of the task completion and are ready to offer support if required.

5 min

Wrap up and Action Items

In this meeting we learnt the objectives:

- Got to know each other and what to do for Technovation Competition
- SDGs and identifying problems
- What is AI and Algorithms

For the next meeting the team will work on:

☐ Tasks 1, 2, 3, 4, 5 from homework

Looking ahead to Week 2:

	• We need the completed Worksheets to select a problem and ideate solutions. • We will learn about Coding and Different App Builders • And a little bit about AI - Artificial Intelligence

WEEK 2

Focus during the meeting:

1. Narrow down and choose a problem
2. Partnering with Organizations
3. Find Patterns with AI

Focus after the meeting:

1. Write problem statement
2. Coding: Exploring Different App Builders
3. Artificial Intelligence: Train a basic AI model

Preparation in advance of the meeting:

- Print/have virtually available the Choosing a Problem Worksheet (one copy per team)
- Print/have virtually available the Researching Problems Worksheet (one copy per team)
- For homework tasks print/have virtually available the Problem Statement worksheet
- Go through the agenda once
- Open all the links and practice the flow of instruction for the activities

10 min 	**Icebreaker** Get the creative juices flowing! - Give everyone the name of an object (i.e. toothbrush, shoebox, brick, piece of paper, ruler). Give them 2 minutes to write down every way to use the object they can think of. Helps to get them thinking outside the box. • If the students need help, give them an example of a chair - could be used to sit, to store objects, to dry clothes, as a stool to reach higher objects, to sleep, etc.
7 min 	**Review Week 1 Tasks** Consult the below checklist with last week's tasks and celebrate the tasks that have been completed! Be positive! • See what is not checked off. Find out what obstacles are preventing team members from achieving goals and see how you can support them in getting there. If required, schedule extra hours to support them or add incomplete tasks to homework for Week 3. ☐ **Task 1:** Page 1 of Understanding your Community Worksheet ☐ **Task 2:** Page 2 of Understanding your Community Worksheet ☐ **Task 3:** Page 3 of Identifying Problems worksheet ☐ **Task 4:** Features of your Favorite App activity ☐ **Task 5:** Coding activity

2 min 	**Introduction** Explain the below terms • Research - gathering information about a subject • Scale - the size of your problem or solution
15 min 	**Topic and Activity 1** Spend 10 minutes to do the 💡**Selecting a Problem Activity 1:** Choosing a Problem Worksheet, based on their research, get team members to write why they want to work on each problem. *(If 1-hour meeting directly ask students to vote and choose a problem - 5 min)* Spend 5 minutes for each student to vote and share why they selected 1 problem based on research and scale. Choose 1 problem that the group has voted for and have consensus.
10 min 	**Topic and Activity 2** ***(only explain the worksheet and give it as Homework if yours is a 1-hour meeting)*** For the selected problem, fill the below worksheet as a group. 💡**Researching Problems Activity:** Researching Problems Worksheet This worksheet is a good candidate for a followup activity. Get started, but ask the team to investigate websites, non-profits, etc and complete the worksheet for next week.
10 min 	**Topic and Activity 3** ***(only explain the activity and give it as Homework if yours is a 1-hour meeting)*** Students will be now identifying partners they can work with to build their project, and look for ways to get people to use their product. • Start by explaining what Partners are with the lesson. • Spend time looking at the two examples of partnerships for students to understand. • Kickstart the 📑**Partnering with Organization Activity:** if there are local organizations that make sense to partner with, this is a good activity to run. Run through the main ideas, and have students identify 2-3 potential local partners. The rest of the activity will be done as a homework task.
5 min	**Break time**
20 min	**Topic and Activity 4** Recollect and discuss Task 4 from Week 1 Homework. Ask each student to share which

	apps they have chosen and what features did they discuss. Transition to below activity *Note: Setting up can be tricky, as a mentor, you should go through the process yourself prior to the meeting so you can help troubleshoot any problems students may have.* 📱**Exploring Mobile App Builders Activity 1:** Setting up App Inventor (students will need a Gmail account, they can create one) | Thunkable. You can have the team split up and have half use App Inventor and half use Thunkable to see how they like the platforms. They can report back to the team how they like/dislike the platform. 📱**Exploring Web App Builders Activity 1:** Install Python. Here is a good set of instructions for Window, Mac, or Linux. Install a code editor (video shows you how to install Visual Studio Code) and then install Streamlit to run it from the code editor. Run a very simple Streamlit web app in the VS Code environment by following this video.
15 min	**Topic and Activity 4** Go to the All About AI section and do the "AI in Action" activity 📈**All About AI Activity:** Check out some websites that use AI, and try to determine what the dataset is behind the AI model. ○ Imaginary Soundscape, AutoDraw, X Degrees of Separation
20 min	**Topic and Activity 5** Ask the students which tool might be more helpful to solve their chosen problem: 1) Mobile App (Thunkable or App Inventor) 2) Web App Note: This need not be a fixed answer and they can change tools and solutions in the next week. Just choose one to proceed with the activity below. *If they choose a mobile app, do this activity:* 📱**Looking Closer Activity:** Coding their first app following the Soundboard Tutorial (App Inventor | Thunkable) *Note for Thunkable: Create a new project, make sure the checkbox "Use the Drag and Drop builder" is checked.*
10 min 	**Homework: Tasks before the next meeting (to do in their own time - 1 hour)** Discuss the below tasks with students. Ask them to take note of the tasks and complete them on their own time. Divide tasks among teammates if needed. *If they did not choose 1 problem as a team, ask them to complete this task first:* *If the team has more than 1 girl* 📝Task 1: Have each student write a problem statement for one of the problems the team is picking from for the next meeting. That way everyone can try it and you'll have a problem statement. Ask them to meet and present (or send virtually) their problem statements to each other.

	Then as a group do this activity: 💡**Selecting a Problem Activity 2:** Problem Statement worksheet teams will answer the questions for their selected problem to construct their problem statement. [OR] *If the team has only 1 girl* Ask the student to research more about each of the problems using the Researching Problems Worksheet to gain deeper understanding and then write the problem statement for the problem that is chosen using the Choosing a Problem Worksheet. *If they already chose 1 problem as a team, give this task directly:* research 📝Task 1: Ask the students to research more about the chosen problem using the Researching Problems Worksheet to gain deeper understanding. 📝Task 2: 💡**Selecting a Problem Activity 2:** Problem Statement worksheet teams will answer the questions for their selected problem to construct their problem statement. 📝Task 3 Coding activity. Have them complete whichever coding activity they chose, based on their chosen platform.
5 min 	**Wrap up and Action Items** In this meeting we covered: • Narrow down and choose a problem • Exploring Different App Builders • Train a basic AI model • Finding Patterns with AI For the next meeting the team will work on: ☐ Tasks 1 , 2, 3 from homework Looking ahead to Week 3: • (Ideation) Identifying Solutions • (Ideation) Market Research • (Ethics) Responsible Research and Innovation • (Coding) Conditional Blocks • (AI) Find Patterns with AI

WEEK 3

Focus during the meeting:

1. Brainstorm solutions to selected problem
2. Coding mobile apps using blocks
3. Find Patterns with AI

Focus after the meeting:

1. Identify target market for their problem solution
2. Research competitors to their solutions
3. Coding blocks / AI models

Preparation - to be done in advance of the meeting:

- Print/have virtually available the Choosing a Solution worksheet
- Print/have virtually available the User Research worksheet
- For homework tasks print/have virtually available the Competitor Research worksheet
- Go through the agenda once
- Open all the links and practice the flow of instruction for the activities

5 min 	**Icebreaker** Take 5 minutes to get the team warmed up and talking, to help make discussions later in the meeting flow better. Suggested icebreaker: Would you rather? - pick a few questions and go around the group asking "Would you rather...?" to start a discussion.
5 min 	**Review Week 2 Tasks** Consult the below checklist with last week's tasks to celebrate the tasks that have been completed and/or support incomplete tasks. ☐ **Task 1:** Complete Researching Problems worksheet for the selected problem ☐ **Task 2:** Complete Problem Statement worksheet for the selected problem ☐ **Task 3:** *If team didn't choose one problem*: Check each individual student's problem statement ☐ **Task 4:** Check on any problems finishing the coding activity Be flexible with the plan for this current meeting. If needed, the team might have to work on completing establishing one specific problem which is needed to move forward.
5 min	**Introduction** Go to the Identifying Solutions section and explain the following sections: • Solutions

	• Features of Innovation • Can technology help?
20 min 	**Topic and Activity 1** 💡**Identifying Solutions Activity 1:** write down the problem, have the team write as many solutions as possible. After 10 minutes, let the team group similar ideas & spend some time chatting about them, then let them pick the top 2-3 ideas. Give students the below tips if they feel stuck as they Brainstorm ideas: • Be sure to capture all ideas, even wild ones! • Defer all judgment, on other people's ideas, and on your own! • Build off each other's ideas. • Be visual - you can draw instead of writing words. • One conversation at a time – don't cut each other off. • Go for as many ideas as you can. • Stay focused.
20 min	**Topic and Activity 2** 💡**Identifying Solutions Activity 2:** Choosing a Solution worksheet, take the top solutions and use the checklist to determine if each solution is innovative, relevant, and uses technology.
15 min 	**Topic and Activity 3** Go over the RRI AREA framework, and do the discussion activities. 💡**Anticipate and Reflect Activity:** Complete the Anticipate and Reflect worksheet. Teams should discuss each question thoughtfully and fill in the worksheet.
10 min	**Break time**
20 min 	**Topic and Activity 4** • Take 5 minutes to discuss and identify the team's target market - people who will use your product. Show these examples for clarity. • 💡**Market Research Activity 1:** User Research worksheet. Teams will generate questions for interviews/surveys, but will conduct them as an external activity. • Take 5 minutes to talk about competitors. • 💡**Market Research Activity 2:** Competitor Research worksheet. Teams identify competitors who might have a similar target market and/or solutions to theirs.
25 min	**Topic and Activity 5** Conditions, Conditional statements, if/else ☐ Learn what conditional blocks do and use them in a **mobile app**

	📱**Conditional Activity:** Update the Counting Game app (App Inventor | Thunkable) to check for a win (total=100) or lose (total > 100) Additional Resources: • if statements in Thunkable ◦ 📱(Coding) Conditionals (30 min)
30 min	**Topic and Activity 6** Go over the 3 parts of machine learning (datasets -> patterns -> predictions in the Find Patterns with AI lesson. Then have students do the train a model activity: 📈**Train a Machine Learning Model:** Rock, Paper, Scissors with MachineLearningForKids. Students use the computer webcam to take pictures of the rock, paper, scissors hand gestures. This will be their dataset. They train it, and use the model in a Scratch project template.
5 min 	**Homework: Tasks before the next meeting (to do in their own time - 2 hours)** Discuss the below tasks with students. Ask them to take note of the tasks and complete them on their own time. Divide tasks among teammates if needed. 📝Task 1: Ask students to spend at least 20 minutes brainstorming other possible solutions through the 💡**Identifying Solutions Activity 1:** write down the problem, have the team write as many solutions as possible. As a team, group similar ideas & spend some time chatting about them, and replace the chosen solution if this is more innovative, relevant and making use of technology. 📝Task 2: Using the questions written in 💡**Market Research Activity 1:** User Research worksheet Teams will conduct the survey and collect at least 15 responses. 📝Task 3: 💡**Market Research Activity 2:** Competitor Research worksheet to find what other organizations/companies are working on similar. 📝Task 4: **Training a Machine Learning Model**: Students should complete the training of the rock, paper, scissors model.
5 min 	**Wrap up and Action Items** In this meeting we covered: • Brainstorming and Choosing Solutions • Market Research • Coding Conditionals • Finding Patterns with AI For the next meeting the team will work on:

	☐ Tasks 1 - 4 from homework Looking ahead to Week 4: • (Ethics) Engage and Act • (Coding) Explore Different Components • (Ideation) Minimum Viable Product • (AI) Datasets • (Coding) Debugging your Code

WEEK 4

Focus during the meeting:

1. Explore different components
2. Identify features for MVP
3. Engage and Act
4. Debugging your code
5. Planning out Datasets

Focus after the meeting:

1. Identify features for MVP
2. Debugging your code
3. Planning your Dataset (if making a model)

Preparation done in advance of the meeting:

- Print/have virtually available the MVP worksheet
- Print/have virtually available the Plan your Dataset worksheet
- Go through the agenda once
- Open all the links and practice the flow of instruction for the activities

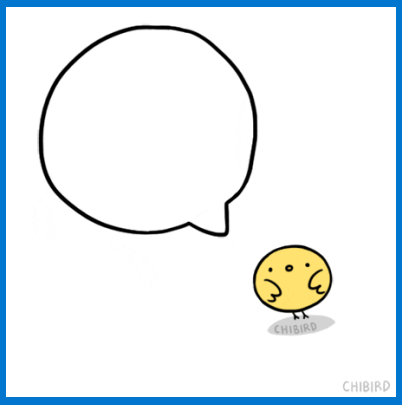

5 min 	**Icebreaker** Scavenger Hunt! Give the team a list of 3 things to find, send them off and have them come back and show their team one or all of the items. The list can be simple, for example (1) the most colorful thing they own, (2) the newest thing they own, (3) something you've owned the longest. Have fun with the prompts, but keep them open so girls don't feel they are missing out on not having a specific item.
5 min 	**Review Week 3 Tasks** Consult the below checklist with last week's tasks to celebrate the tasks that have been completed and/or support incomplete tasks. *If Junior Division:* ☐ **Task 1:** Brainstorming more possible solutions and choosing a relevant one. ☐ **Task 2:** Conduct the survey with a minimum of 15 people using questions on User Research worksheet ☐ **Task 3:** Complete the Competitor Research worksheet ☐ **Task 4:** Complete Rock, Paper, Scissors activity to train a model *If Senior Division:* ☐ **Task 1:** Create questions on User Research worksheet and conduct the survey with a minimum of 15 people. ☐ **Task 2:** Complete the Competitor Research worksheet If the team is confused about the above surveys and research, you might need to break down tasks into smaller chunks that are attainable. For example, if the team needs to get feedback from users, you might break it down to (1) create interview questions (2) identify

	users to ask (3) contact and set up interview time (4) interview (5) report back. Give additional time until next week if they need to properly complete the tasks.
10 min 	**Introduction** Go to the Different Components (Thunkable | App Inventor) section and explain: • Smartphone components Explain the below terms • User Interface Components • Media Components • Sensors • Social Components • Connectivity Components • Storage Components • AI Components
10 min	**Topic and Activity 1** 📱**Different Components Activity:** Have students choose at least one component from the list of media, social, connectivity, sensor, storage components to include in your app, find documentation and/or a tutorial for the component. Get students to code a practice app or start building their app! 📱**(Coding) Different Components in App Inventor or Different Components in Thunkable (60 min)** In this activity students will: • Review different components available to use in Thunkable and App Inventor • Find one component that can help their app • Research a tutorial and code at least one component of their app Additional Resources: • appinventor.org (App Inventor) • dragandropcode.com (Thunkable)
20 min 	• **Topic and Activity 2** • Following up on the Engage and Act lesson from Week 3, teams will now go further in thinking about the ethics of their project. Review the AREA framework, and do the discussion from the lesson. • 💡**Engage and Activity:** Teams will complete the Engage and Act worksheet, to ensure their app is ethical and safe for all stakeholders.
10 min	**Break time**

30 min 	**Topic and Activity 3** 💡**Minimum Viable Product Activity:** MVP worksheet, list features in order of priority. Use this as the team's Explain how features contribute to an MVP • **💡(Ideation) Minimum Viable Product (30 min)** • Prioritize features for the Minimum Viable Product of your project
30 min	**Topic and Activity 4** AI Datasets lesson, only if teams plan to include an AI model in their app. Do the **Datasets Activity:** Plan your Dataset worksheet, to start thinking about the data you need for your project.
15 min	**Topic and Activity 5** Debugging, Version Control, Test Data, Comments ☐ Gain some tips to find errors and debug your code 📱**Debugging Activity:** Add a comment to code. This is not required, but commenting code is a helpful way to document what certain code blocks do. In this activity students will: • Learn some techniques to find the errors in your code and to fix them, specifically in Thunkable and App Inventor (many programming languages have built-in debuggers to help programmers find and fix errors, Thunkable and App Inventor do not). **📱(Coding) Debugging (20 min)** ○ **❗Coding Tip❗**
5 min 	**Homework: Tasks before the next meeting (to do in their own time - 2 hours)** Discuss the below tasks with students. Ask them to take note of the tasks and complete them on their own time. Divide tasks among teammates if needed. 📝Task 1: Read the adc article on MVPs to better understand what features are important for a Minimum Viable Product 📝Task 2: Complete the Engage and Act worksheet, which will be useful in completing the ethics questions in their learning journey. 📝Task 3: Continue to practice 📱**Different Components Activity:** Have students choose

	at least one component from the list of media, social, connectivity, sensor, storage components to include in your app, find documentation and/or a tutorial for the component. Get students to code a practice app or start building their app! 📝Task 4: If teams are including an AI model in their project, complete the Plan your Dataset worksheet.
5 min 	**Wrap up and Action Items** In this meeting we covered: • Explore different components • Engage and Act around Ethics • Identify features for MVP • AI Datasets • Debugging your code For the next meeting the team will work on: ☐ Tasks 1 - 4 from homework Looking ahead to Week 5: • (Ideation) Paper Prototypes • (Ideation) Planning your Project • (Coding) Variables & Lists • (AI) Train your AI Model

❗ CODING TIP ❗

Make coding feel manageable!

Often girls get excited with their app or AI project idea and it can be a bit overwhelming when it comes to coding it. Encourage the team to choose manageable goals, and to prioritize them. Girls get discouraged when they actually start coding their app and don't know where to start. By breaking it down into small achievable chunks, they should be able to make progress.

How?

- **The MVP worksheet (this week) can help teams to list the features they want to add.**
- **Choose one feature. Add it in your chosen platform and then test it to make sure it works.**
- **Use versioning (make a copy (Thunkable - although you are limited to 10 projects) or checkpoint (App Inventor) so you preserve the working version of the app.**
- **Add the next feature. And repeat.**

WEEK 5

Focus during the meeting:

1. Prototyping & planning a project
2. Identify features for MVP
3. Training AI model
4. Storing Data in Variables & Lists
5. Generative AI in your App

Focus after the meeting:

1. Prototyping
2. AI in your App

Preparation done in advance of the meeting:

- Print/have virtually available the Paper Prototype
- Print/have virtually available the Project Canvas
- Go through the agenda once
- Open all the links and practice the flow of instruction for the activities

5 min	**Icebreaker** Virtual meeting: Touch blue In person meeting: Sync Claps
5 min	**Review Week 4 Tasks** Consult the below checklist with last week's tasks to celebrate the tasks that have been completed and/or support incomplete tasks. ☐ **Task 1:** what did they learn from adc article on MVPs ☐ **Task 2:** Engage and Act worksheet ☐ **Task 3:** Different Components Activity ☐ **Task 4:** Plan your Dataset worksheet, only if using AI model Be flexible with the plan for this current meeting. If needed, the team might have to work on their paper prototype, which is needed to move forward.
10 min	**Topic and Activity 1** (7 min) Today we will be starting by making a prototype of our idea. Watch the video on Prototyping. (3 min) Introduce the below activity. Ask the students to discuss and decide what materials they could use to prototype their specific idea and ask them to do this activity

	at home. 💡**Prototyping Activity 1:** Create a Paper Prototype based on the MVP worksheet that students completed in last week's lesson.
30 min	**Topic and Activity 2** Start by exploring these Planning Tips using the online lesson.. Now let us create a project canvas to get organized to accomplish tasks. 💡**Planning your Project Activity:** Use the Project Canvas to define major parts of the project, and generate a list of actions items for the team. Use these below videos if the students feel stuck while creating their project canvas: • Alumnae video on prioritizing features • Project Canvas manual
10 min	**Break time**
30 min 	• **Topic and Activity 3** • Using the Variables and Lists lesson(s), introduce the key terms variables, local storage and cloud storage. Open the activity that students have chosen (App Inventor OR Thunkable) and do the 📱**Quiz App Activity**.
60 min 	**Topic and Activity 4** **Only teams including an AI (machine learning) model in their projects need to do these activities.** Go over the training process with teams and the different platforms they can use to train their model. Then have teams complete the 📱**Train your AI Model Activity:** In this activity students will: • Decide on a platform to train their AI model • Gather their initial dataset and start training the AI model for their project. If teams are making a mobile app, they should do the train your AI model activity. If they are making a web app, they can do the Build a Predictive App activity.
30 min 	**Topic and Activity 5** Teams might be considering adding a chatbot or image generator in their app as a feature. The Adding Generative AI to your App lesson will guide them through that. 📱**Add a Chatbot Activity:** If teams are using App Inventor to code their app, they can follow the Personal tutor tutorial to see how to integrate a chatbot in their app. If teams are using text-based languages, the lesson offers some alternative tutorials.

5 min 	**Homework: Tasks before the next meeting (to do in their own time - 2 hours)** Discuss the below tasks with students. Ask them to take note of the tasks and complete them on their own time. Divide tasks among teammates if needed. 📝Task 1: Continue 💡**Prototyping Activity 1:** If building an app, create a Paper Prototype based on the MVP worksheet that students completed in last week's lesson. 📝Task 2: If using AI in your app, continue to practice 📈**Train your AI Model Activity:** Using one of the platforms listed in the lesson (or any other one the team has found), train their AI model. 📝Task 3: Complete the 📱**Quiz App Activity.** 📝Task 4: If adding a chatbot to their app, complete the 📱**Add a Chatbot Activity.**
5 min 	**Wrap up and Action Items** In this meeting we covered: • Prototyping & planning a project, • Identify features for MVP • Storing data in Variables • Training AI model For the next meeting the team will work on: ☐ Tasks 1-4 from homework Looking ahead to Week 6: • (Entrepreneurship) Outreach to Users • (Ethics) An Ongoing Process • (Coding) App Examples for your Project

❗ MENTOR TIP ❗

Getting Feedback!

Encourage the team to reach out to end users as they outline their MVP to make sure they are making something that will be used.

How?

- Contact local (or national) organizations that are already in this space
- Find people in their community whom the problem affects - ask friends, parents, teachers for contacts
- Conduct surveys - school class, friends, reach out on social media
- Use your own contacts
- Ask meaningful questions:
    - Targeted, specific questions, e.g. "Does the app help with step X of this process to

resolve the issue? If not, what could we change to improve your experience?" "Which proposed features would be most helpful to address the problem, listed by priority?"

- Role model an interview with the team

WEEK 6

Focus during the meeting:

1. User Outreach
2. Ethics and Impact of Solution
3. Coding Apps!

Focus after the meeting:

1. User outreach
2. Building the App/AI

Preparation done in advance of the meeting:

- ⏱ Print/have virtually available the Your Continuous Ethics Action Plan worksheet
- ⏱ Go through the agenda once
- ⏱ Open all the links and practice the flow of instruction for the activities

5 min 	**Icebreaker** Share the love: Go around the room (or zoom screen) and have each person say something they appreciate about another team member. Each person should pick someone who has not been appreciated yet, so everyone gets spotlighted. You can also do this activity with post-its, either in person or online chat, where everyone can post something they appreciate about each of their teammates.
5 min 	**Review Week 5 Tasks** Consult the below checklist with last week's tasks to celebrate the tasks that have been completed and/or support incomplete tasks. ☐ **Task 1:** Continue 💡**Prototyping Activity** ☐ **Task 2:** If using AI in your app, continue to practice 📈**Train your AI Model Activity:** ☐ **Task 3:** Complete the 📱**Quiz App Activity**. ☐ **Task 4:** If adding a chatbot to their app, complete the 📱**Add a Chatbot Activity** Be flexible with the plan for this current meeting. The team might have questions related to using App or AI developing platforms. If needed, use the time from Activity 3 and Activity 4 in this lesson to clarify those questions and understand the App or AI platforms better.
15 min 	**Topic and Activity 1** Let's talk about users and how we might reach them. The Outreach to Users lesson covers what an Early Adopter is and strategies for outreach. (25 min) 💡**User Outreach Activity**: Fill out worksheet to plan strategies to reach users. Students can do the User Feedback activity for homework.

30 min 	**Topic and Activity 2** (5 min) Today let us think about the impact of our solution • Go to Ethics as an Ongoing Process lesson to introduce the words Ethics and Algorithmic Bias • Recap the AREA framework. (25 min) 💡 **Your Continuous Ethics Action Plan Activity:** Worksheet asks teams to answer questions about their project to consider its impact on stakeholders and how they will continue to consider ethics as their project evolves.
10 min	**Break time**
50 min	**Topic and Activity 3** The rest of the lesson will be devoted to tutorials that relate to teams' apps. Depending on whether they are using App Inventor or Thunkable, they can look at the available tutorials, and choose one to complete. They can also start working on features of their own apps.
5 min 	**Homework: Tasks before the next meeting (to do in their own time - 2 hours)** Discuss the below tasks with students. Ask them to take note of the tasks and complete them on their own time. Divide tasks among teammates if needed. 📝 Task 1: Watch the video "Making Ethical Technology for a Positive Impact". Watch the video Gender Shades. 📝 Task 2: Ask students to spend at least 20 minutes as a group to complete the Your Continuous Ethics Action Plan worksheet. Make sure to list down what actions and decisions you are taking inorder to pass the ethics test. Write down and ask me any questions/confusions you have. 📝 Task 3: Follow through on the User Outreach by getting actual user feedback on your app. 📝 Task 4: Spend 30-60 minutes starting/continuing building your App/AI Platform Integration. Use online videos for doubts or reach out to me. Next week we will be inviting 1-2 people to test the first feature of the app and get feedback.
5 min 	**Wrap up and Action Items** In this meeting we covered: • Ethics and Impact of technology and Solution • User outreach • Building the App/AI For the next meeting the team will work on:

	☐ Tasks 1-4 from homework Looking ahead to Week 7: • (Coding) Storing Data • (AI) Software Options (for teams including AI models in their apps)

❗ Mentor tips ❗

Coding is hard! Don't get discouraged.

At this point, if your team is making a mobile app, they might have started coding the app. The leap from tutorials to building your own app is big, and teams may struggle to make the app they have planned. Here are some tips for you as a mentor to help them make progress:

- Don't just give them the right answer (if you know it), encourage them to find the answer themselves. Ask questions of them to direct them to the solution they are looking for.
- Encourage students to experiment and try new things. Open a new project for experimentation and try out new features and components.
- Work together. Consider a pair programming model if possible (meeting in person). Get team members to look at each other's code and help each other out.
- Take advantage of our mentor Slack community! Other mentors might have experienced the same issue or have a stronger technical background and can help you troubleshoot.
- Both Thunkable and App Inventor have community forums, where users help each other out with questions and issues. These are fantastic sites to get answers as people on the forums are really into the platform and know it well.
- Test and save often!
- Keep working versions of the app or project. Make a copy or checkpoint so you can always return to the last working version.
- Use online tutorials to troubleshoot issues.
- Here are some student-made tutorials for Technovation Girls.
- AppInventor2 Troubleshooting use this link to explore troubleshooting on the App Inventor website

Make the students record a video to support other girls if they encountered a problem and solved it themselves! It's a success celebration and adds to the technovation coding community!

WEEK 7

Focus during the meeting:

1. AI Software options
2. Storing data

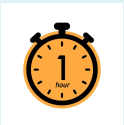

Focus after the meeting:

1. Integrating their AI model
2. Developing their solution

Preparation done in advance of the meeting:

- The mentor and team should invite 1-2 people to test the first feature of the app and get feedback. Testing session will be conducted in the last 45 mins of the meeting.
- Go through the agenda once
- Open all the links and practice the flow of instruction for the activities

5 min 	**Icebreaker** Rose, Thorn, Bud: Team members can quickly convey what's on their mind by sharing three bits of information: Rose: A recent positive happening like a personal highlight or win Thorn: A challenge or roadblock they need support on Bud: An idea for the future they'd like to share, or excitement for events in motion
5 min 	**Review Week 6 Tasks** Consult the below checklist with last week's tasks to celebrate the tasks that have been completed and/or support incomplete tasks. ☐ **Task 1:** Watch the video "Making Ethical Technology for a Positive Impact". Watch the video Gender Shades. ☐ **Task 2:** Fill flowchart in Pages 2 & 3 of the Ethical Journey worksheet. ☐ **Task 3:** Continue to work on building your solution. Please add any leftover tasks from above to the homework for this week. If task 3 is not done, please give time in this meeting to work on building the first feature before the testing and feedback session.
10 min 	**Topic and Activity 1** Use this time to work on the Project Name & 100-Word Description. Once finalized, add it to their submission.
20 min	**Topic and Activity 2** *If you are making a mobile app:*

	Using the Storing Data in Thunkable or Storing Data in App Inventor lesson, introduce the key terms local storage and cloud storage. Open the activity for the platform students have chosen (App Inventor OR Thunkable) and do the 📱 **Store Game Scores Activity.**
20 min	**Topic and Activity 3** *If you are making an AI model for your app:* Help students choose a platform to integrate their model. In the selected software, students create a new project and add their model, begin adding components and code to take action based on their model's predictions. Use the provided videos or search for more videos on the web to support the students through this process. Any leftover tasks can be added to the homework 📱 **Integrate your AI Model:** Using the chosen platform, work on integration of your model in your app in the Integrating your AI Model activity.
10 min	**Break time**
15 min 	**Topic and Activity 4** Teams will continue to work on their app solution and/or their AI model integration.
30 min 	**Topic and Activity 5** Teams will present their 1st feature to the users and collect feedback from them. *If this testing extends beyond 30 mins, disperse the students and send them the below homework tasks through message/email.*
5 min 	**Homework: Tasks before the next meeting (to do in their own time - 1 hour)** Discuss the below tasks with students. Ask them to take note of the tasks and complete them on their own time. Divide tasks among teammates if needed. *If you are making a mobile app:* 📝 Task 1: Complete the **Store Game Scores Activity.** *If you are making an AI model:* 📝 Task 2: Spend 30 minutes to 📱 **Integrate your AI Model** in your app.
10 min 	**Wrap up and Action Items** In this meeting we covered: • Storing information locally and in the cloud • Integration AI models into apps

	For the next meeting the team will work on: ☐ Tasks 1 & 2 from homework Looking ahead to Week 8: • (Videos) Outline your Pitch and Technical Videos • (Entrepreneurship) User Adoption Plan [Junior division] • (Coding) APIs

WEEK 8

Focus during the meeting:

1. Pitch Outline
2. User Adoption *(junior teams only)*

Focus after the meeting:

1. Pitch Storyboard
2. User Adoptions (juniors)
3. APIs

Preparation done in advance of the meeting:

- Print/have virtually available the Outline your Pitch Video worksheet
- Print/have virtually available the Outline your Technical Video worksheet
- Print/have virtually available the Storyboard
- Print/have virtually available the User Adoption Plan template

- Go through the agenda once
- Open all the links and practice the flow of instruction for the activities

5 min	**Icebreaker** Question for discussion: "If you could do one thing differently in the past week, what would it be?" This might spark conversation on motivation and time management on the project. Or it could just be one way for members to connect on their personal lives.
10 min	**Review Week 7 Tasks** Consult the below checklist with last week's tasks to celebrate the tasks that have been completed and/or support incomplete tasks. ☐ Task 1: Complete the Store Game Scores Activity. *If you are using an AI model:* ☐ Task 2: Spend 30 minutes to 📱Integrate your AI Model in your app.
40 min	**Topic and Activity 1 (Divide the below tasks among the teammates)** We will be working on multiple tasks in the next 40 minutes. Please divide the below 5 tasks among the team and start working individually. Of course, you can take help from your teammates or me. ***Note:*** *If there is only 1 person in the team, ask them to start working on Task 1 and complete how much ever they can. Take the rest of the tasks as homework for this week.*

	Introduction for Task 1, 2, 3, and 4: The Pitch Video submission which is a maximum of 3 minutes and shows viewers why the problem is important to you, how you approached your solution, why it's the best solution and how it will have a positive impact. Direct the students to this Additional Resource if they need more clarity about this submission. **Task 1** 📣**Outline Pitch and Technical Video Activity 1:** Outline your Pitch Video worksheet helps to address each part of the judging rubric by answering each question. Make use of materials from past weeks that you can use in the video. **Task 2** 📣**Outline Pitch and Technical Video Activity 2:** Outline your Technical Video worksheet helps to address each part of the judging rubric by answering each question. Make use of materials from past weeks that you can use in the video. **Task 3** 📣**Outline Pitch and Technical Video Activity 3:** Storyboard your videos using drawings for each part of the video (stick figures work!), give each picture a description, and use multiple sheets if needed. **Task 4** 📣**Outline Pitch and Technical Video Activity 4:** using the outline and storyboard from the above activities, prepare a script for the pitch video and one for the technical video. **Task 5** ***(Junior teams only)*** 📑**User Adoption Plan Activity:** Use the User Adoption Plan template to answer all the questions needed as part of the user adoption plan. *Take the completed answers into a finished document for submission* - should be 1-2 pages in length. • Explain their target market, how they engaged the target market to learn about and use their product, and future plans to get more people to use their product. • Explain how feedback from users changed plans for the product. If they can show that they have tested their product with actual users, that is a real bonus.
10 min	**Break time**
30 min	**Topic and Activity 2** 📱**API Activity:** Fruit Nutrition API • open the Fruit Information project (App Inventor | Thunkable) ○ For Thunkable only, "Click to remix" • Run the app to see how it works • Right now, the app displays only Calorie information. Add a second label below

	CalorieLabel to display one of the other nutritional values returned. • Solutions in the Thunkable lesson and App Inventor lesson
10 min	**Topic and Activity 3** Continue to work on building the app/AI. Discuss the second feature and start building it.
5 min 	**Homework: Tasks before the next meeting (to do in their own time - 1 hour)** Discuss the below tasks with students. Ask them to take note of the tasks and complete them on their own time. Divide tasks among teammates if needed. 📝Task 1: Complete the **Outline Pitch and Technical Video Activities 1, 2, 3, and 4** if any are still incomplete. 📝Task 2: Complete the **User Adoption Plan Activity *(junior teams only)*** if it is still incomplete. 📝Task 3: Please continue to build your app/AI. Identify the second feature and start building it.
5 min 	**Wrap up and Action Items** In this meeting we covered: • Pitch Outline • User Adoption • APIs For the next meeting the team will work on: ☐ Tasks 1, 2, 3 from homework Looking ahead to Week 9: • (Videos) Recording your Pitch and Technical Videos

WEEK 9

Focus during the meeting:

1. Practice and record pitch video
2. Second feature of app/AI

Focus after the meeting:

1. Second feature of app/AI
2. Document learning journey

Preparation done in advance of the meeting:

- ⏱️ Go through the agenda once
- ⏱️ Open all the links and practice the flow of instruction for the activities

5 min 	**Icebreaker** **Destination charades** - this might get the acting juices flowing! Each person chooses a favorite place they have visited, or hope to visit in the future, and then act out the place. Other team members guess what the destination is. For example, for Hawaii, you could do a hula dance.
5 min 	**Review Week 8 Tasks** Consult the below checklist with last week's tasks to celebrate the tasks that have been completed and/or support incomplete tasks. ☐ **Task 1:** Complete the **Outline Pitch and Technical Video Activities 1, 2, 3, and 4** if any are still incomplete. ☐ **Task 2:** Complete the **User Adoption Plan Activity *(junior teams only)*** if it is still incomplete. ☐ **Task 3:** Please continue to build your app/AI. Identify the second feature and start building it.
40min 	**Topic and Activity 1** *If the team is not done with their video outlines, take some time to complete and review them before recording.* 📣Recording Videos Activity: Record your pitch and technical videos. • Review the script together and assign who will be recording each part for the pitch and technical videos. **Remember:** • The **pitch** is maximum 3 minutes ○ Teams may record extra footage and edit down to the 3 minute max later. ○ English or English subtitles are required. ○ Record in landscape • The **technical video** is maximum 3 minutes ○ Have a good outline/script going into recording. ○ Utilize screen recording software to record their project in action. • All members of the team should appear and speak

	Direct the students to this Additional Resource if they need more clarity about this submission.
10 min	**Break time**
25 min	**Topic and Activity 2** (continue to record or taking this time to work on other parts of the submission, such as their user adoption plan or business plan, or project description)
20 min	**Topic and Activity 3** Continue to work and build the second feature of the app/AI. Build it to the level where it can be shown to users to collect feedback.
5 min 	**Homework: Tasks before the next meeting (to do in their own time - 1 hour)** Discuss the below tasks with students. Ask them to take note of the tasks and complete them on their own time. Divide tasks among teammates if needed. 📝Task 1: Start gathering photos for the learning journey (ie. results from surveys, prototype photos, the team working together, etc.) and upload them to their submission 📝Task 2: Continue to record at home if the pitch and technical video are not completed 📝Task 3: Spend 30 minutes continuing building your App/AI Platform Integration. Use online videos for doubts or reach out to me. Next week we will be inviting 1-2 people to test the first feature of the app and get feedback.
5 min 	**Wrap up and Action Items** Review the objectives that you accomplished in the meeting, and what is left for the students to do on their own. In this meeting we covered: • Practice and record pitch video • Second feature of app/AI • Document learning journey For the next meeting the team will work on: ☐ Tasks 1, 2, & 3 from homework Looking ahead to Week 10: • Testing & Feedback • (Videos) Edit your Videos

WEEK 10

Focus during the meeting:

1. Edit pitch video content
2. Screen recording techniques for demo video

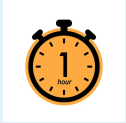

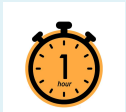

Focus after the meeting:

1. Editing Videos
2. Complete final touches to app/AI

Preparation done in advance of the meeting:

- Go through the agenda once
- Open all the links and practice the flow of instruction for the activities
- Provide as much support as required regarding submissions for teams.

5 min	**Icebreaker** Picture Metaphors - Try printing your own images. Participants choose one that describes themselves at the moment as a participant. Ex: "I am a hot air balloon - it's work to get off the ground but then I can see far!" Great for warm ups, reflection, deeper thoughts.
5 min	**Review Week 9 Tasks** Consult the below checklist with last week's tasks to celebrate the tasks that have been completed and/or support incomplete tasks. ☐ **Task 1:** Start gathering photos for the learning journey (ie. results from surveys, prototype photos, the team working together, etc.) and upload them to their submission ☐ **Task 2:** Continue to record at home if the pitch and technical video are not completed. ☐ **Task 3:** Spend 30 minutes continuing building your App/AI Platform Integration. Use online videos for doubts or reach out to me. Next week we will be inviting 1-2 people to test the first feature of the app and get feedback.
40 min	**Topic and Activity 1** 📣**Editing Videos Activity:** Prioritize the most important edits to make to be able to submit. Choose a video editing software and edit your videos. Get feedback from your team members and mentors and incorporate their feedback. • Use video editing software to combine video footage into a 3 minute pitch video and a 3 minute technical video. Direct the students to this Additional Resource if they need more clarity about this submission.

10 min	**Break time**
20 min	**Topic and Activity 2** *If the team is not done with editing their videos, take some time to complete and review them before uploading. Take at least 5 minutes to review the uploading process and decide who on the team will be uploading the videos and submitting the links.* 📣**Upload Videos:** Choose Youtube or Vimeo to upload videos. Make sure they are unlisted or public, then upload the links to the Technovation submission platform.
30 min 	**Topic and Activity 3** Team will present their 2nd feature to the users and collect feedback from them. *If this testing extends beyond 30 mins, disperse the students and send them the below homework tasks through message/email.*
5 min 	**Homework: Tasks before the next meeting (to do in their own time - 1 hour)** Discuss the below tasks with students. Ask them to take note of the tasks and complete them on their own time. Divide tasks among teammates if needed. 📝Task 1: Continue to edit the videos at home if they are incomplete. Complete final touches to app/AI. After completing it, then upload the video for submission.
5 min 	**Wrap up and Action Items** In this meeting we covered: • Edit pitch video content • Screen recording techniques for demo video For the next meeting the team will work on: ☐ Tasks 1 from homework Looking ahead to Week 11: • (Ideation) Learning Journey

WEEK 11

Focus during the meeting:

1. Learning Journey submission

Focus after the meeting:

1. Fine-tuning and Reviewing submission materials

Preparation done in advance of the meeting:

- Go through the agenda once
- Open all the links and practice the flow of instruction for the activities
- Provide as much support as required regarding submissions for teams
- Print/have available online the Learning Journey template

5 min	**Icebreaker** Take a picture: Prep the team to bring a picture of something to the meeting (could be a picture of your shoe, out your window, your closet, etc). Share the pictures in the meeting and have each person talk about the picture they brought.
5 min	**Review Week 10 Tasks** Consult the below checklist with last week's tasks to celebrate the tasks that have been completed and/or support incomplete tasks. ☐ **Task 1:** Continue to edit the videos at home if they are incomplete. Complete final touches to app/AI. After completing it, then upload the video for submission.
45 min (for 20 min)	**Topic and Activity 1** 💡**Learning Journey:** Reflect together on their journey. This can be written separately and then combine thoughts or jot down ideas together as a team. • Write your Learning Journey, a required part of the submission. It is a written piece with specific word counts for each section about what they learned during the Technovation Challenge. They should include: ○ what challenges they overcame ○ How did they decide what information they gathered for your project was legitimate ○ what resources they used to build on (ie. credit for resources they used - tutorials, starter code, etc.). This should be in bibliography format ○ They also need to include 2-6 images of their journey in the submission. • Brainstorm key points they want to include
10 min	**Break time**

20 min 	**Topic and Activity 2** *Spend 10 min*: **Check-in:** You are very close to submission time! It is critical to check in with the team to ensure they have most (if not all) of the parts of the submission ready to submit. *Spend 10 min*: **Make a plan** with team members to wrap up incomplete parts so they are ready to submit by the deadline. • Review the submission guidelines to ensure they have all the needed parts of their submission ○ If there are parts missing, they will, with the mentor, create an action plan to get those things completed in time
25 min	**Topic and Activity 3** Use this time to start working on the tasks created and assigned in the above action plan.
5 min 	**Homework: Tasks before the next meeting (to do in their own time)** Discuss the below tasks with students. Ask them to take note of the tasks and complete them on their own time. Divide tasks among teammates if needed. 📝Task 1: Fine-tune and review the submission materials. Spend time on completing any tasks that are incomplete from the previous weeks.
5 min 	**Wrap up and Action Items** Review the objectives that you accomplished in the meeting, and what is left for the students to do on their own. In this meeting we covered: • Learning Journey submission For the next meeting the team will work on: ☐ Tasks 1 from homework • Looking ahead • Submitting the project!!!

WEEK 12

Focus during the meeting:

1. Submit your project
2. Celebrate!

Preparation done in advance of the meeting:

- Print/have virtually available the submission guidelines and the judging rubric.
- Go through the agenda once
- Open all the links and practice the flow of instruction for the activities
- Provide as much support as required regarding submissions for teams.

10 min 	**Icebreaker** Each person on the team takes a minute to talk about the one thing they are most proud of about the project.
40 min  (for 20 min)	**Preparing to submit** • As a team, review the submission guidelines and the judging rubric to make sure you have all the elements, and meet all the requirements for a completed submission. • Walk through the submission with your team, so you know everything is in order. Help the team through the process, as there can be issues and questions along the way. • **Not every submission is going to be perfect and that's okay.** ○ Encourage your team to submit what materials they have. ○ For example, it is okay for the pitch video to not be fully edited. Judges will be able to provide valuable feedback on how to improve and continue working on your project for the next season.
40 min  (for 20 min)	**Final Stretch** Give students an additional 40 minutes if required to work on finishing up submissions.

20 min	**Submission Checklist** Check-off the below items one last time to ensure all the submissions are in for your team: ☐ **1. .** Project Name & Description ☐ 100 word project description ☐ Explain how the team considered ethics in developing their app. (max 150 words ☐ **2.** Pitch Video ☐ **3.** Technical Video ☐ **4.** User Adoption Plan (Junior Teams) or Business Lean Canvas (Senior Teams) ☐ **5.** Technovation Learning Journey - 100 words about your learning journey, what you learned - 100 words about how the team decided what information they gathered was legitimate - 2-6 pictures that describe your journey - Bibliography of resources used for the project, including generative AI, code snippets, tutorials, websites, etc - Images of your user research results, survey results, etc. - Pictures or screenshots of prototypes or previous versions of your project ☐ **6.** App Source Code - Mobile and Web App source code - Apps with AI models can also include screenshot of dataset training or spreadsheet or link to images/sounds folder. ☐ **7.** Team Photo and Summary (Optional)
10 min 	**Wrap up and Action Items** **Celebrate!** Spend some time during this final meeting to celebrate what the team has accomplished! You can have some snacks or play a game so the team can relax. • Congratulate them on what they have accomplished! ○ Some teams may not have gotten as far as they had hoped, **remind them of what they *have* accomplished, and express how proud you are of them and that they should be proud of themselves**. • Get the team to think about what's next. Do they want to keep working on their project? Are they finished? • Continue the journey, encourage girls to join the Alumnae mailing list and the LinkedIn group.

ADDITIONAL RESOURCES

📣(Pitch) Outline your Pitch and Technical Videos (90 min)

In these activities students will:

- Answer key questions that need to be included in the pitch based on the judging rubric. For their **4 minute pitch video** and **2 minute technical video**.
- Think about how to show their product in action, explain how it works, and demonstrate some of the technical knowledge you have gained by explaining some of the code or training behind the product in the technical video.
- Document what their pitch and technical videos will include using an outline and storyboard to build their script.

❗ PITCH TIP ❗

Common challenges for the pitch video:

- Teams either put in too much detail about their app (and a very long pitch as a result), or the teams go into detail about their problem and need to talk more about their app design specifically.
- Some of the team members are shy and don't want to talk or talk very quietly. Remind them about the importance of their voice!
- Talk about competitors - teams often forget to say how their product compares to others and is better than the competition.

Additional Resources:

- The Pitch
- You, their mentor! When the team has finished their planning materials, it is important for you to review and provide feedback.
- Some additional activities to build out their pitch:
    - **Use the 3-level pitch**: a 5-second pitch (concise, clear sentences about your idea) , a 30-second pitch (add how you plan to execute the idea), and then create a 4 minute pitch.
    - **Build a message map**: A) Create a twitter friendly headline B) Give three key benefits of the headline C) Give stories, statistics, and examples of the benefits.
    - **Reuse the problem statement.** The problem statement and solution can now be made more concise and used in a pitch. Statistics should be included.

📣(Videos) Recording Videos (105 min)

In this activity students will:

- Review the script together and assign who will be recording each part for the pitch and technical videos.

Remember:

- The **pitch** is maximum 3 minutes
    - Teams may record extra footage and edit down to the 3 minute max later.

    - English or English subtitles are required.
    - Record in landscape
- The **technical video** is maximum 3 minutes
    - Have a good outline/script going into recording.
    - Utilize screen recording software to record their project in action.
- All members of the team should appear and speak

❗ RECORDING TIPS ❗

Your team will be recording their pitch video this week. Some may have never recorded video, so here are some tips to keep in mind.

- You can allow students to **use their phone** to film the video.
- Film in **landscape mode**.
- **Nerves are real** when it comes to pitching! Encouraging girls to practice pitching their ideas in workshops and weekly sessions throughout the season helps normalize the process and prepares them for recording final pitch video or attending an in-person or online event (if your region hosts one).

A student once said: *"I will join Technovation Girls but I do not want to pitch."* By the end of the Technovation Girls launch workshop in January, she stood up with her team and pitched to the entire room.

📣(Videos) Editing Videos (60 min)

Additional editing tips and resources:

- Lifehacker: The Basics of Video Editing: The Complete Guide
- Bitpod: How to make pitch and proposal videos
- Indiegogo: Tips on Strong Video Pitches
- Technovation App Gallery

Keep in mind the submission requirements:

- **Pitch** - Maximum of **4 minutes**
- **Technical** - maximum of **2 minutes**
- Share via **Youtube or Vimeo**. The videos must be uploaded as unlisted or publicly viewable. We cannot guarantee videos without these credentials will be judged.
- If you are not speaking English in the video, you must include **English subtitles**. And we highly recommend that videos have English subtitles even if English is spoken in the video.
